How to read and understand this benefit illustration?

This benefit illustration is intended to show year-wise premiums payable and benefits under the policy, at two assumed rates of interest i.e., 8% p.a. and 4% p.a.

Some benefits are guaranteed and some benefits are variable with returns based on the future performance of your insurer carrying on life insurance business. If your policy offers guaranteed benefits these will be clearly marked guaranteed in the illustration table on this page. If your policy offers variable benefits then the illustrations on this page will show two different rates of assumed future investment returns, of 8% p.a. and 4% p.a. These assumed rates of return are not guaranteed and they are not the upper or lower limits of what you might get back, as the value of your policy is dependent on a number of factors including future investment performance.

The final factor will be calculated after applying surrender timing factors as set out in Appendix III c. All the factors applicable to GSV calculation are guaranteed throughout the policy term.

SSV for policies surrendering after premium payment of five full policy years will be calculated as follows: SSV = A + B + C Where: A = (Paid-up GMB + Paid-up GAs) XSpecial Surrender Value factor for maturity benefit B = (Paid-up Sum Assured on death+ Paid-up GAs) XSpecial Surrender value factor for death benefit C = (accrued reversionary bonuses + contingent reversionary bonus) X Special Surrender Value factor Paid-up GMB, Paid-up GAs, Paid-up Sum Assured on death and contingent reversionary bonus for premium paying or fully paid policies will be calculated as defined for Paid-up policies in Part C, section 3 and Part D, Section 3.
